Improving Your Software Reliability and Security

8:30 – 9:15 am	Your situation, your needs
9:15 -10:00 am	Goal Setting ... <i>How Good Do You Need To Be?</i>
10:00 - 10:15 am	Break
10:15 - 11:00 am	Designing-In Reliability
11:00 - 11:45 am	Building-In Reliability
11:45 - 12:45 pm	Lunch Provided
12:45 - 1:30 pm	Watching As You Go ... <i>Assessment and Mid-Course Corrections</i>
1:30 - 2:15 pm	Release Decision ... <i>When to Let Go</i>
2:15 - 2:30 pm	Break
2:30 - 3:30 pm	Resources for the Journey
3:30 - 4:30 pm	Consolidation and Commitment ... <i>Where to Go From Here</i>

Improving Your Software Reliability and Security

Do you need to reduce the frequency and severity of failures due to software defects?

Do you need to assure adequate confidence in your systems?

This workshop is intended to help equip you with techniques and tools to meet those goals ... and do so in a cost-effective way.

What are YOUR OWN goals for today?

Take notes ...

APPENDIX A: RELIABILITY BASICS

A.1: SYSTEM TECHNICAL PERFORMANCE MEASURES.....

A.2: SOFTWARE AND SYSTEM RELIABILITY DEFINITIONS.....

A.3: RELIABILITY FIGURES-OF-MERIT.....

A.4: SOFTWARE QUALITY METRICS.....

A.5: RELEVANT STATISTICAL CONCEPTS.....

Probability Distributions.....

Statistical Hypothesis Testing.....

Parameter Estimation.....

Confidence Bounds.....

APPENDIX B: SOFTWARE RELIABILITY RESOURCE.....

APPENDIX C: TOOLS TO SUPPORT SOFTWARE RELIABILITY.....

C.1: SOFTWARE RELIABILITY PREDICTION TOOLS.....

C.2: SOFTWARE RELIABILITY ESTIMATION TOOLS.....

C.3: SOFTWARE RELIABILITY GROWTH TOOLS.....

C.4: SOFTWARE METRICS TOOLS.....

C.5: SOFTWARE TEST COVERAGE TOOLS.....

C.6: MISCELLANEOUS SOFTWARE RELIABILITY TOOLS.....

C.7: SYSTEM RELIABILITY TOOLS.....

APPENDIX D: ACRONYMS

SECTION 1.0: NEED FOR SOFTWARE RELIABILITY

SECTION 2.0: SOFTWARE AND SYSTEM RELIABILITY

SECTION 3.0: TESTING.....

3.1: RELATIONSHIP BETWEEN POLICIES/STANDARDS/GUIDANCE AND SOFTWARE TESTING.....

3.2: SYSTEM TEST REQUIREMENTS.....

3.3: SYSTEM OPERATIONAL REQUIREMENTS.....

3.4: TEST STRATEGIES.....

3.5: SOFTWARE RELIABILITY TESTING.....

Overview

Software Test Coverage Metrics.....

Control-Flow Testing.....

Loop Testing

Data-Flow Testing.....

Transaction-Flow Testing.....

Domain Testing.....

Finite-State Testing.....

Orthogonal Array Testing.....

Software Statistical Usage Testing.....

Operational Profile Testing.....

Markov Testing.....

Optimal Release Time.....

Security Testing

3.6: RELIABILITY GROWTH AND RELIABILITY DEMONSTRATION/QUALIFICATION TESTING.....

SECTION 4.0: TEST SUPPORT ACTIVITIES

4.1: FAILURE REPORTING AND CORRECTIVE ACTION SYSTEM (FRACAS).....

4.2: OVERVIEW OF DATA COLLECTION AND ANALYSIS FOR RELIABILITY GROWTH.....

Figure 3—Example SR measurement application

Figure F.2—Illustrating projected design defect density as a function of the development organization's design capability, as measured in terms of CMM capability

Progressive Software Reliability Prediction

Steps:

1) Collect Data:

Get fault rates for defect data profile.

2) Curve fit:

Use Rayleigh Model to project *latent fault density*, f_i , at delivery.

3) Predict Steady-State MTBF:

Insert observed f_i into Keene's model for operational MTBF profile.

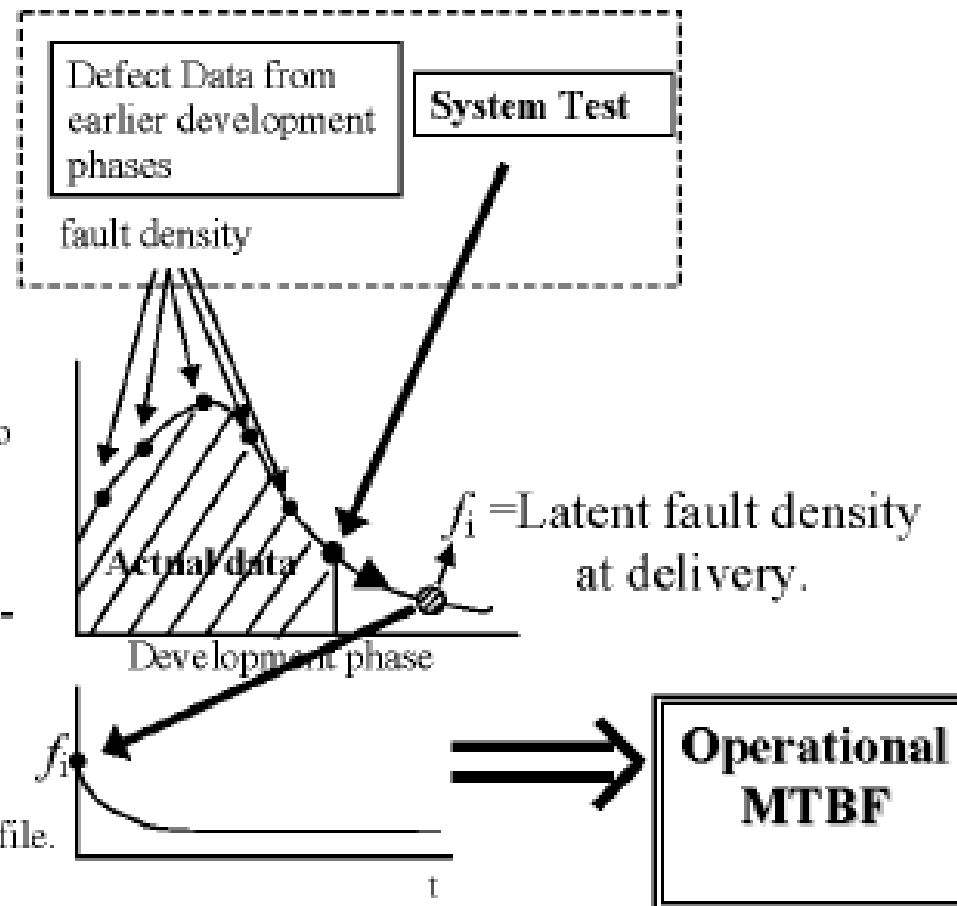

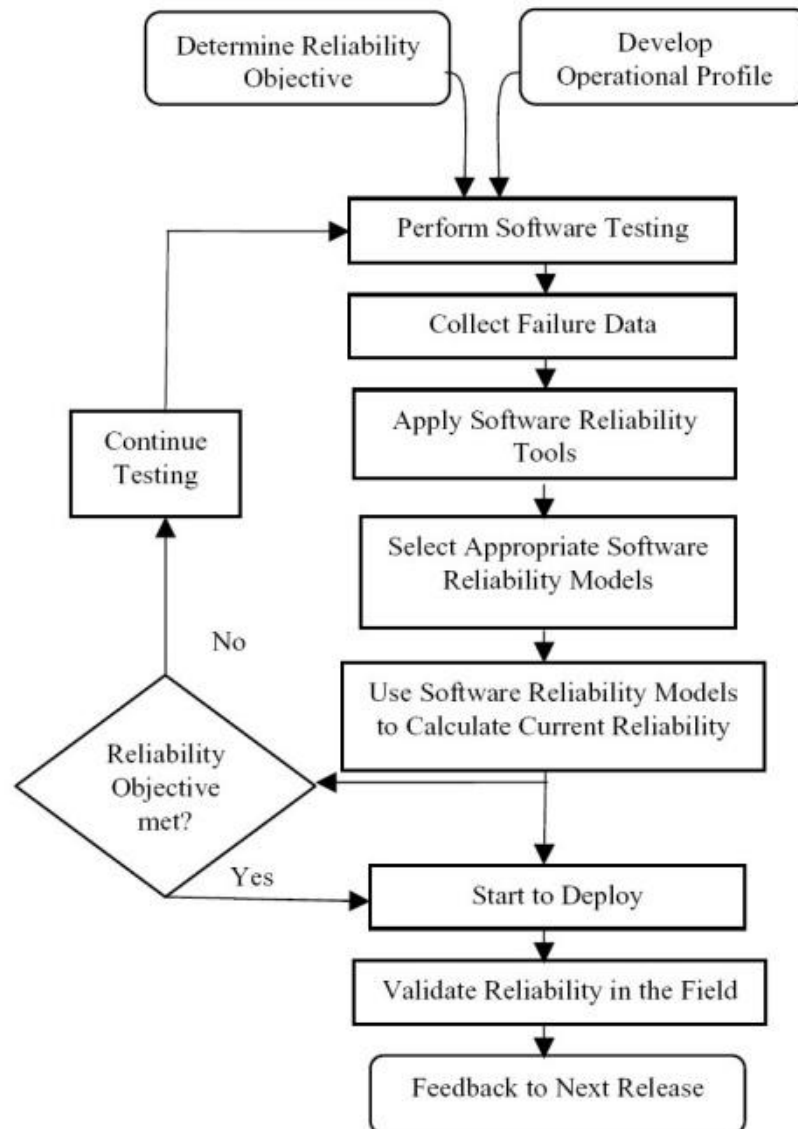

Figure F.4—Progressive SR prediction

Statistical Modeling and Estimation of Reliability Functions for Software

Figure 3. Typical SMERFS Output Curves

Figure 4. Typical SMERFS Output Calculations

Ozmet (2005) analyzed OpenBSD 2.2 data

79 vulnerabilities discovered 1998-2002

Applied reliability growth models in SMERFS

Found best fit from
Musa logarithmic model

Acceptable results also from
other models

“Software Security Growth Modeling: Examining Vulnerabilities with Reliability Growth Models.” Andy Ozment, University of Cambridge. *First Workshop on Quality of Protection*, Milan, Italy, September 15, 2005.

[Berkeley Software Distribution = Unix-derived operating system]

Shin and Williams (2013) analyzed Firefox web browser

Used fault prediction models based on traditional metrics

Found valid to predict vulnerabilities, although with high rate
of false positives

“Can traditional fault prediction models be used for vulnerability prediction?” Yonghee Shin (DePaul University) and Laurie Williams (North Carolina State University).
Empirical Software Engineering (2013) 18:25-59.
